

Garrett Ennis

Email: williamgarrettennis@gmail.com | Suwon, South Korea | Home base: Maryland, USA

Education

M.S. Computer Science and Engineering, Sungkyunkwan University (SKKU), Suwon, South Korea (2026–2028 expected). SecAI Lab. Research on AI-assisted defense and SOC automation.

B.S. Computer Networks and Cybersecurity, University of Maryland Global Campus (2021), GPA 3.455/4.0

Minor: East Asian Studies

Relevant Coursework: Threat Management & Vulnerability Assessment (A), Cloud Technologies (A), Windows Server Networking (A), Interconnecting Cisco Devices (A), Trends in Computer Network Security (Capstone, A), Advanced Information Systems Security, Linux Administration, Network Intrusion Detection, Statistics, College Algebra.

Professional Experience

AI Security Researcher – SecAI Lab, Sungkyunkwan University (SKKU) (2026–Present)

- Study how AI assistance changes adversary capability, and what detection has to do once reconnaissance and evasion are cheap to automate.
- Evaluate where AI assistance lowers analyst load in a security operations center (SOC), and where it moves the bottleneck instead of removing it.
- Research in progress, with no published results yet.

Lead Security Engineer – SysArc (2022–2026)

- Designed and implemented enterprise SOC architectures supporting multiple commercial and government contractor clients.
- Engineered SIEM ingestion pipelines processing firewall, endpoint, and cloud telemetry; improved alert fidelity and reduced noise through structured normalization validation.
- Directed threat hunting initiatives and cloud security operations across Azure and Microsoft 365 environments.
- Implemented NIST 800-171 and CMMC-aligned frameworks for regulated environments.
- Delivered executive-level reporting and strategic security posture assessments.

Cybersecurity Engineer III (Penetration Testing) – Walmart Global Tech (2021–2022)

- Conducted enterprise application penetration testing for web and mobile platforms.
- Developed structured threat models and collaborated with engineering teams to integrate secure SDLC controls.
- Evaluated authentication and authorization implementations in high-sensitivity environments.

Network Administrator – Blue Heron Systems (2019–2021)

- Managed distributed infrastructure spanning 900+ branch locations.
- Engineered hybrid WAN and VPN routing architectures supporting large-scale enterprise operations.
- Conducted recurring security assessments and rapid incident response adjustments.

Research Interests

AI-augmented adversarial attack and defense; SOC optimization; threat hunting, OPSEC, and adversary intelligence.
